Adopted as a NMRA Standard

The OpenLCB Standard document appended to this cover sheet has been formally adopted as a NMRA Standard by the NMRA Board of Directors on the date shown in the Adopted column in the Version History table below.

Version History

<table>
<thead>
<tr>
<th>Date</th>
<th>Adopted</th>
<th>Summary of Changes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sep 17, 2010</td>
<td></td>
<td>Initial version prepared for Feb-2011 NMRA BoD meeting.</td>
</tr>
<tr>
<td>Feb 17, 2015</td>
<td>Feb 20, 2016</td>
<td>Changed title to “Layout Command Control” Changed document numbering and file name</td>
</tr>
<tr>
<td>Apr 25, 2021</td>
<td>July 2, 2021</td>
<td>Changed LCC logo to include the ® symbol Changed “Layout Command Control” to have the ™ symbol Added the NMRA Legal Disclaimer fine-print Changed the OpenLCB license to “Creative Commons Attribution-ShareAlike 4.0 International”</td>

Important Notices and Disclaimers Concerning NMRA Standards Documents

The Standards (S), Recommended Practices (RP), Technical Note (TN) and Technical Information (TI) documents of the National Model Railroad Association (“NMRA Standards documents”) are made available for use subject to important notices and legal disclaimers. These notices and disclaimers, or a reference to this page, appear in all standards and may be found under the heading "Important Notices and Disclaimers Concerning NMRA Standards Documents.”

Notice and Disclaimer of Liability Concerning the Use of NMRA Standards Documents

NMRA Standards documents are developed within the Standards and Conformance Department of the NMRA in association with certain Working Groups, members, and representatives of manufacturers and sellers. NMRA develops its standards through a consensus development process, which brings together volunteers representing varied viewpoints and interests to achieve the final product. NMRA Standards documents are developed by volunteers with modeling, railroading, engineering, and industry-based expertise. Volunteers are not
necessarily members of NMRA, and participate without compensation from
NMRA.

NMRA does not warrant or represent the accuracy or completeness of the
material contained in NMRA Standards documents, and expressly disclaims
all warranties (express, implied and statutory) not included in this or any
other document relating to the standard or recommended practice, including,
but not limited to, the warranties of: merchantability; fitness for a particular
purpose; non-infringement; and quality, accuracy, effectiveness, currency, or
completeness of material. In addition, NMRA disclaims any and all
conditions relating to results and workmanlike effort. In addition, NMRA
does not warrant or represent that the use of the material contained in NMRA
Standards documents is free from patent infringement. NMRA Standards
documents are supplied “AS IS” and “WITH ALL FAULTS.”

Use of NMRA Standards documents is wholly voluntary. The existence of
an NMRA Standard or Recommended Practice does not imply that there are
no other ways to produce, test, measure, purchase, market, or provide other
goods and services related to the scope of the NMRA Standards documents.
Furthermore, the viewpoint expressed at the time that NMRA approves or
issues a Standard or Recommended Practice is subject to change brought
about through developments in the state of the art and comments received
from users of NMRA Standards documents.

In publishing and making its standards available, NMRA is not suggesting or
rendering professional or other services for, or on behalf of, any person or
entity, nor is NMRA undertaking to perform any duty owed by any other
person or entity to another. Any person utilizing any NMRA Standards
document, should rely upon their own independent judgment in the exercise
of reasonable care in any given circumstances or, as appropriate, seek the
advice of a competent professional in determining the appropriateness of a
given NMRA Standards documents.

IN NO EVENT SHALL NMRA BE LIABLE FOR ANY DIRECT,
INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR
CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO:
THE NEED TO PROCURE SUBSTITUTE GOODS OR SERVICES; LOSS
OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION)
HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY,
WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT
(INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY
WAY OUT OF THE PUBLICATION, USE OF, OR RELIANCE UPON
ANY STANDARD OR RECOMMENDED PRACTICE, EVEN IF
ADvised OF THE POSSIBILITY OF SUCH DAMAGE AND
REGARDLESS OF WHETHER SUCH DAMAGE WAS FORESEEABLE.

Translations
NMRA’s development of NMRA Standards documents involves the review
of documents in English only. In the event that an NMRA Standards
document is translated, only the English version published by NMRA is the
approved NMRA Standards document.

Official Statements
A statement, written or oral, that is not processed in accordance with NMRA
policies for distribution of NMRA communications, or approved by the
Board of Directors, an officer or committee chairperson, shall not be
considered or inferred to be the official position of NMRA or any of its
committees and shall not be considered to be, nor be relied upon as, a formal
position of NMRA.

Comments on Standards
Comments for revision of NMRA Standards documents are welcome from
any interested party, regardless of membership. However, NMRA does not
provide interpretations, consulting information, or advice pertaining to
NMRA Standards documents.

Suggestions for changes in documents should be in the form of a proposed
change of text, together with appropriate supporting comments. Since
NMRA standards represent a consensus of concerned interests, it is
important that any responses to comments and questions also receive the
concurrency of a balance of interests. For this reason, NMRA, its
departments, Working Groups or committees cannot provide an instant
response to comments, or questions except in those cases where the matter
has previously been addressed. For the same reason, NMRA does not
respond to interpretation requests. Any person who would like to participate
in evaluating comments or in revisions to NMRA Standards documents may
request participation in the relevant NMRA working group.

Laws & Regulations
Users of NMRA Standards documents should consult all applicable laws and
regulations. Compliance with the provisions of any NMRA Standards
document does not constitute compliance to any applicable regulatory
requirements. Implementers of the standard are responsible for observing or
referring to the applicable regulatory requirements. NMRA does not, by the
publication of NMRA Standards documents, intend to urge action that is not
in compliance with applicable laws, and NMRA Standards documents may
not be construed as doing so.

Copyrights
NMRA Standards documents are copyrighted by NMRA under US and
international copyright laws. They are made available by NMRA and are
adopted for a wide variety of both public and private uses. These include
both use, by reference, in laws and regulations, and use in private self-
regulation, standardization, and the promotion of modeling, structural and
engineering practices and methods. By making NMRA Standards documents
available for use and adoption by public authorities and private users,
NMRA does not waive any rights in copyright to the NMRA Standards
documents.

IMPORTANT NOTICE
NMRA Standards documents do not guarantee or ensure safety, security,
health, or environmental protection, or ensure against interference with or
from other systems, devices or networks. NMRA Standards documents
development activities consider research and information presented to the
standards development group in developing any safety recommendations.
Other information about safety practices, changes in technology or
technology implementation, or impact by peripheral systems also may be
pertinent to safety considerations during implementation of the standard.
Implementers and users of NMRA Standards documents are responsible for
determining and complying with all appropriate safety, security,
environmental, health, and interference protection practices and all
applicable laws and regulations.
1 Introduction (Informative)
This document defines the physical layer for carrying OpenLCB-CAN over a single Controller Area Network (CAN) bus. It is not otherwise normative.

2 Intended Use (Informative)
Conforming OpenLCB CAN nodes can be connected by cables to form a linear CAN bus with optional short stubs. OpenLCB CAN nodes generally have two RJ45 modular connectors and can be daisy-chained together with suitable computer-network (“Ethernet”) cables. A CAN terminator is installed by the user at each end of the main bus.

A limited amount of power can be distributed via the cable, allowing a few nodes to draw their power from a nearby (less than 20 ft / 6m) source attached to the common bus.

3 References and Context (Normative)
In this document
• “RJ45” refers to the miniature 8 position unkeyed plug and jack defined in sections Section 6.1.1.3 and Section 6.1.1.4, respectively, of the TIA-968-A specification.
• “UTP” refers to CAT-3 or better cable as defined in TIA/EIA-568-B or the successor TIA/EIA- 568-C. This specifically includes CAT-5e cable.
• “CAN” refers to the electrical and protocol specifications as defined in ISO 11898-1:2003 and ISO 11898-2:2003 and their successors.

External certification of parts shall be accepted for conformance to these standards.
Conformance with a later version of a standard shall be accepted as conformance with the referenced versions.

4 Physical Interconnection (Normative)
CAN connections between nodes shall be made using UTP cable. There shall be a RJ45 plug on the cable and RJ45 jack on the node unless the cable is permanently attached to the node.
The signal, conductor and pair assignments shall be:

<table>

</tbody>
</table>

Cables, including cables attached to nodes, shall carry conductors 1 & 2 as a pair, and conductors 3 & 6 as a pair.

Cables may, but are not required to, carry conductors 4 and 5. Conductors 4 and 5, if present, shall be carried as a pair.

Cables may, but are not required to, carry conductors 7 and 8. Conductors 7 and 8, if present, shall be carried as a pair.

If a node provides two or more connections, conductors 1 through 8 shall be provided on all connections. Conductors 1 through 7 shall be connected in parallel on all connections. If the node does not provide power on pin 8 on all connectors, pin 8 on all connectors shall be connected in parallel. All wiring discussed in this paragraph shall be rated to carry at least 1A.
Nodes shall connect conductors 3 and 6. This connection shall be rated to carry at least 1A.

A node may, but is not required to, connect conductor 7 with conductors 3 and 6. Nodes that require conductor 7 to be connected to conductors 3 and 6 for proper operation shall connect conductor 7 to conductors 3 and 6.

Voltages of up to 100 volts AC or either polarity DC on the reserved conductors 4 and 5 shall not damage the node nor prevent normal operation of the node.

Voltages of up to 27 volts AC or either polarity DC on the PWR_NEG / PWR_POS conductors shall not permanently damage the node.

5 Data Transport (Normative)

Data shall be transferred using a CAN signal at 125kbps and CAN frame protocol.

Any devices providing bus termination shall conform to CAN requirements for that termination.

A node may, but is not required to, provide a method for bus termination as part of the node. If so, there shall be a user-accessible method for enabling and disabling the termination, and the node shall be shipped from the original manufacturer with the termination disabled.

6 Supply of Power (Normative)

A node may, but is not required to, provide power to the cable PWR_POS / PWR_NEG conductors.

If a node provides power, it shall provide at least 9VDC and no more than 15VDC from zero current draw up to its specified maximum current. Its specified maximum current shall not exceed 500 mA. The specified maximum current shall be permanently written on the node in a location visible to the user. This label is required whether or not the node provides power to the cable.

7 Consumption of Power (Normative)

Nodes may, but are not required to, draw power from the PWR_POS / PWR_NEG conductors in the cable. Nodes shall not draw more than 500 mA at any PWR_POS / PWR_NEG voltage from 7.5VDC to 15VDC. Nodes that draw power shall operate properly with a supply voltage of 7.5VDC to 15VDC on the PWR_POS / PWR_NEG conductors. The maximum current drawn by each node shall be permanently written on that node in a location visible to the user. This label is required whether or not the node draws power from the cable.
